

MVULA

BOREHOLE DRILLING AND CLEANING

Borehole Water Survey

Mvula Borehole drilling is using the latest electronic technology to survey borehole water

We provide valuable information to clients in regards to locating suitable water sources.

Our company helped various clients save thousands of Rands in their search for the right water borehole drilling locations. Rest assured we can finish the task right away, because our water surveyors are trained in modern scientific methods and latest aquifer locating technology. Our team of groundwater surveyors pinpoint the perfect drilling spots, so you can build your well on the optimal drill site. We are based in Pretoria and we service the whole South Africa and neighbouring Countries

The Survey Device

The device shows the type of water (Fresh Water, Salty Water or Normal Water) It also shows depth of water in metres and the amount of water in percentage

Fig.1 quality of ground water found by the device

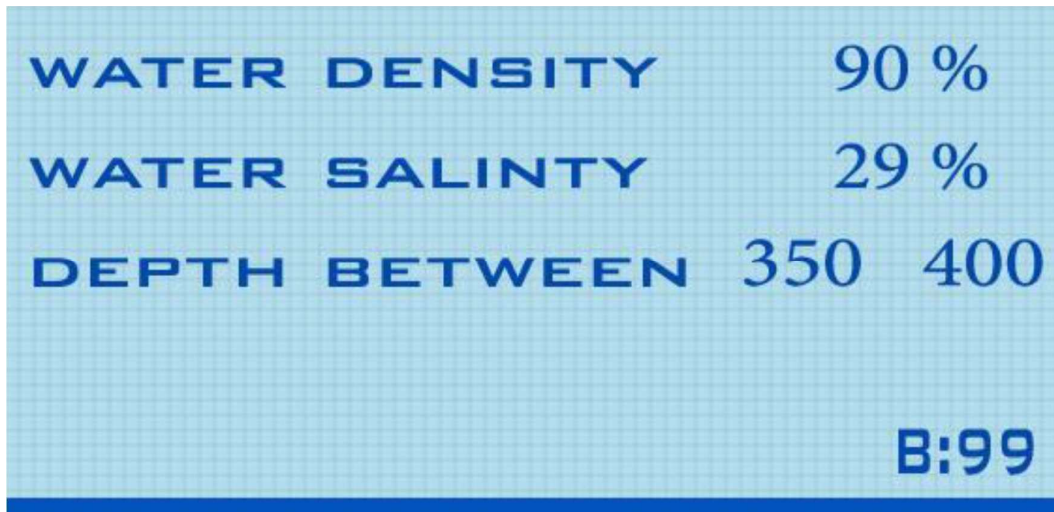

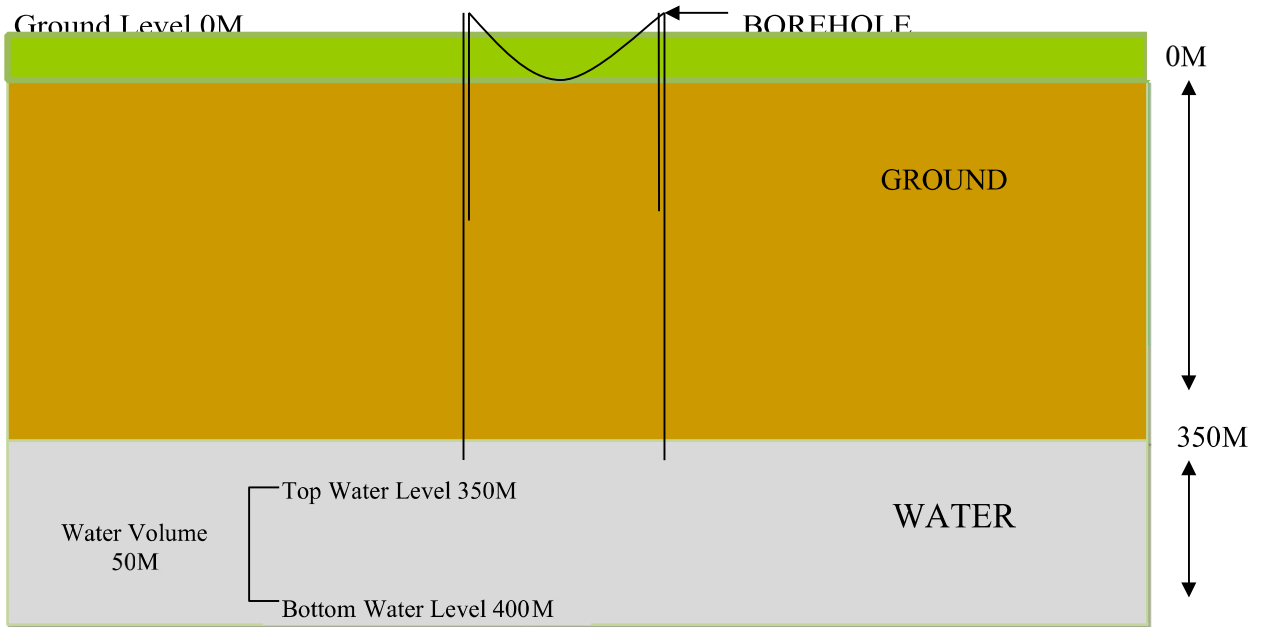

Fig.2 Water density and salinity in percentage Water depth 350 to 400(depth of the river =50metres)

400M Fig.3 Water Level

Survey only R2 500.00

Survey with quality of water and Depth Report R4 500.00
